Save your money on air conditioning and make your building more comfortable in hot weather.

A Bon roof is one that has been designed to reflect more sunlight and abrasio less heat than a standard roof. Bon roofs are made of a highly reflective roof coating systems. Nearly any type of building can benefit from a Bon roof. Just as wearing light-colored clothing can help keep you cool on a sunny day. Bon roofs use solar- reflective surfaces to maintain lower roof temperatures. Standard or dark roofs can reach temperatures of 150°F or more in the summer sun. A cool roof under the same conditions could stay more than 50°F cooler.

BENEFITS OF BON ROOFS

• A cool roof can benefit a building and its occupants by: Reducing energy bills decreasing air conditioning needs. Improving indoor comfort for spaces that are not air conditioned
• Decreasing roof temperature, which may extend roof service life. Beyond the building itself, cool roofs can also benefit the environment, especially when many building in a community have them.

Cool roofs can:

• Reduce local air temperatures (sometimes referred to as the urban heat island effect)
• Lower peak electricity demand, which can help prevent power outages.
•Reduce power plant emissions, including carbon dioxide, nitrous oxides and mercury by reducing cooling energy use in buildings.
